

Title	Evidence	Evidence strongly supports claim	Evidence partially supports claim	Evidence refutes claim
<i>Graph 1</i>	CO2 emissions		Humans are in fact increasingly emitting carbon dioxide, but shows no relationship with temperature or that the atmosphere's chemistry is changing	
<i>Graph 2</i>	CO2 ppm		The atmosphere's chemistry is changing to include more carbon dioxide, but does not present relationship with human emissions or temperature	
<i>Graph 3</i>	CO2 ppm proxy		Shows that human activity is changing atmosphere's chemistry	
<i>Graph 4</i>	Temperature anomalies		Shows that world is getting hotter, no relationship to emissions or human activity	
<i>Graph 5</i>	CO2 ppm, emissions, temperature	Shows clear association between human emissions, atmosphere's chemistry, and temperature		
<i>Video 1</i>	Year of CO2 ppm		Shows that human activity is changing atmosphere's chemistry	
<i>Video 2</i>	Carbon isotopes		Illustrates how human activity is changing atmosphere's chemistry
