

1. 7, 5
2. No specific city field, each address is unique and you would need to parse each record. Making city a separate field would solve this
3. Make all of these separate fields
4. For every project a manager oversees, phone and address is listed again. If a manager or a managers phone or address is updated, if you do not update every single record, there would be inconsistencies
5. You would lose any information for the respective teachers, especially if they are only in KOM (maria Cardoza)
